

TAUSEEF TANTARY

Full-Stack Engineer

tantary.tauseef.atwork@gmail.com | +91 60063 12132 | Baramulla, India
github.com/Tauseef-Hilal | linkedin.com/in/tauseef-tantary | tauseef.in

Professional Summary

Full-Stack Engineer developing scalable web systems with **Node.js, TypeScript, Next.js, Redis, and PostgreSQL**. Engineered secure APIs and optimized background job processing, reducing overall API latency by up to 30x.

Skills

- **Languages:** TypeScript, JavaScript, SQL, Python
- **Backend:** Node.js, Express.js, REST APIs, WebSockets, JWT Auth, BullMQ
- **Frontend:** React.js, Next.js, TanStack Query, TailwindCSS
- **Databases:** PostgreSQL, MongoDB, Redis, Prisma, Mongoose
- **Infra & Architecture:** Docker, Nginx, Cloudflare R2, System Design, Git

Work History

Software Developer Intern | Ganjean Health | Sopore, JK, India

February 2025 - May 2025

- Designed **RESTful APIs** for patient management and analytics, **serving 5,000+ users**.
- Streamlined **Docker** build processes, reducing team environment setup time from **1+ hours to minutes**.
- Resolved API edge cases during early development cycles, decreasing post-deployment logic errors.
- Accelerated delivery speed through code reviews, API debugging, and cross-functional design collaboration.
- Mentored incoming team members and assisted in debugging environment issues, increasing team efficiency.

Freelance Software Developer | Digifista | Baramulla, JK, India

January 2025 - April 2025

- Automated record management for **4,000+** students by delivering a full-stack Next.js-based ID generation portal.
- Integrated **Cloudflare R2** cloud storage with signed URLs, ensuring secure and controlled asset access.
- Engineered a bulk PDF export pipeline rendering **4,000+** IDs in minutes, eliminating manual processing.
- Spearheaded a phased delivery approach to **manage scope creep**, guaranteeing the core production system met stakeholder deadlines.

Projects

Homelab – Self-Hosted Storage & Communication System | github.com/Tauseef-Hilal/homelab

- Optimized storage I/O path using **BullMQ** workers, slashing API latency from **~1200ms to ~40ms (~30x)**.
- Engineered batched **async bulk operations** handling **1k+** files with concurrent execution and job tracking.
- Implemented **Redis + Lua** rate limiting, sustaining **900+ req/sec** traffic with a **stable p95 latency of ~300ms**.
- Built resumable **chunked uploads** with chunk-level **deduplication**, reducing duplicate storage by **50%**.
- Developed real-time global chat using **WebSockets** and **Redis Pub/Sub** for scalable, low-latency messaging.
- Secured the platform via **JWT** authentication with **refresh token rotation** and **multi-device sessions**.
- Architected granular **file-sharing** controls utilizing **bitmask permissions** and hierarchical access resolution.
- Instrumented comprehensive system observability through **structured logging** and **health-check endpoints**.

Pathfinding Algorithm Visualizer | github.com/Tauseef-Hilal/Pathfinding-Visualizer

- Programmed an interactive, educational visualizer illustrating **8+ pathfinding algorithms** in Python and Pygame.
- Accumulated **230+ GitHub stars** and **33+ forks** following public repository release.

Education

→ **Bachelor of Computer Applications** | Govt. Degree College Baramulla

CGPA: 8.4 (~3.7/4.0) | August 2025

Certifications

❖ **CS50x: Introduction to Computer Science** – EdX Harvard University (2022)

Achievements

★ **Starstruck** on GitHub twice, with **360+ total stars** on repositories.
