

TAUSEEF TANTARY

Full-Stack Engineer

tantary.tauseef.atwork@gmail.com | +91 60063 12132 | [LinkedIn](#) | [GitHub](#) | Baramulla, India - 193103

Professional Summary

Full-stack JavaScript engineer with hands-on experience building **production-grade web systems** using **Node.js, TypeScript, React/Next.js, PostgreSQL, MongoDB, and Docker**. Experienced in designing secure APIs, real-time features, background job processing, and scalable data flows. Comfortable owning features end-to-end, collaborating with teams, and shipping maintainable systems.

Skills

- **Languages:** JavaScript, TypeScript, SQL, Python
- **Backend:** Node.js, Express.js, REST APIs, WebSockets, JWT Auth, BullMQ
- **Frontend:** React.js, Next.js, TanStack Query, TailwindCSS
- **Databases & Infra:** PostgreSQL, MongoDB, Redis, Prisma, Mongoose, Docker, Cloudflare R2
- **Practices:** API Design, Background Jobs, System Debugging, Performance Optimization, Documentation

Work History

Software Developer Intern | Ganjean Health | Sopore, JK, India

February 2025 - May 2025

- Developed **REST APIs** for Patients, Appointments, and Analytics, serving **5000+ users**.
- Implemented **secure data handling** for sensitive information and structured exception flows.
- Automated environment-specific configurations and migrations via **Docker Compose**.
- Collaborated on **API design, debugging, and code reviews**, improving delivery speed and stability.
- Assisted teammates in environment setup and feature implementation.

Freelance Software Developer | Digifista | Baramulla, JK, India

January 2025 - April 2025

- Designed and delivered a **Next.js-based ID generation system** automating **1,000+ student records**.
- Integrated **secure cloud storage** using Cloudflare R2 with signed URLs for controlled access.
- Consulted with stakeholders to gather requirements, propose solutions, and ensure timely delivery.

Open Source Contributor | Hacktoberfest | Remote

August 2023 - September 2023

- Authored **10+ Playwright test cases for freeCodeCamp**, improving test coverage and reliability.
- Implemented algorithms in **TheAlgorithms/Python** repository, reaching **5000+ users** globally.

Projects

🔗 Homelab – Self-Hosted Storage & Communication System

- Architected a **LAN-first, Dockerized monorepo** system for secure file storage and real-time communication.
- Designed a robust **JWT authentication system** with refresh tokens for secure session handling.
- Implemented **background job processing** using BullMQ for heavy tasks like thumbnail generation.
- Optimized client-side data fetching using **TanStack Query** and centralized state management.
- Structured the system for scalability, observability, and maintainability.

🔗 Pathfinding Algorithm Visualizer

- Developed an interactive visualization tool for **8+ pathfinding algorithms**.
- The project gained **220+ GitHub stars** and is used by students globally to understand algorithm behavior.

🔗 Real-Time Messaging App

- Engineered a **cross-platform real-time chat application** with media sharing and offline storage.
- Implemented message synchronization, push notifications, and client-side caching.

Education

→ **Bachelors in Computer Applications** | Govt. Degree College Baramulla

CGPA: 8.4 | August 2025

Certifications

❖ **CS50x: Introduction to Computer Science** – EdX Harvard University (2022)

Achievements

★ **Starstruck** on GitHub twice, with **350+ total stars** on repositories.
